# **Community Resilience WORKBOOK**

The Power of Emergency and Disaster Preparedness

#### About the authors

This workbook grew out of collaboration between the Portland Bureau of Emergency Management (PBEM) and three community-based organizations, the Asian Pacific American Network of Oregon (APANO), Latino Network, and Voz Workers' Rights Education Project (Voz). For more information on how to connect with us, please see the Resources section at the end of the workbook.

### **Acknowledgments**

Latino Network, APANO, and Voz gratefully acknowledge PBEM for the generous support that made this project possible. Their commitment to promoting community readiness, coordinated responses, and building resilience in a growing and diverse Portland are exemplified in this workbook. We would also like to acknowledge and express our deepest gratitude for the diverse communities who made this workbook possible, including immigrants, day laborers, youth and young adults of immigrant families, multigenerational households, families of mixed immigration status, and the multitude of other diverse identities and experiences that each community member embodied that informed their contributions throughout the development of this text.

## **Background**

This project grew out of a need for culturally competent emergency preparedness materials. Our organizations turned to our communities—immigrants from Asia and Latin America—to listen to their experiences, needs, and concerns. The content and design are based on their contributions, combined with the expertise from PBEM. This workbook has been designed for use in workshop settings in communities from diverse cultural backgrounds. We hope that it meets your community's needs and helps you to build community resilience.

### Introduction

# The Power of Preparedness

Everyone can get ready for a disaster. It does not need to take a lot of time or money. This workbook explains how to prepare for, survive and recover from emergencies and disasters.

Taking action today can help save lives during an emergency, reduce injuries, and minimize damage. Being informed and planning ahead will also help you be more mentally prepared to manage difficult events. By getting prepared, you can help not just yourself, but also your family, friends, neighborhood and community.

Disasters happen without warning. It is important to get prepared before an emergency, when you are calm and can think clearly. Before a disaster strikes ask yourself these questions:

- How will I contact my loved ones if we are separated during a disaster?
- Do I have an emergency kit to survive on for a few days or weeks before help arrives?
- Do I know what to do during and after a disaster?

This workbook will help you answer these questions and get started.

# **Preparing for an Emergency**

Emergency preparedness starts with safety. As you go through the day, think about how you and people you care about can stay safe if a disaster happens.

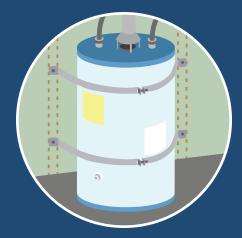

Step 1: Identify hazards and safer spaces

Know potential hazards near where you live, work or play. The Willamette River, Columbia River and Johnson Creek can flood. A fire could happen in a park or in your home or workplace. An earthquake could affect the entire City. Take an assessment of your home safety. Here are examples of things you can do to increase safety:

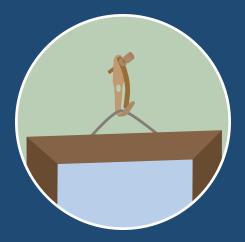

- Store heavy objects on low shelves so they won't fall far.
- Place your bed away from windows or items that may fall.
- Know the location of your main electrical switch so you can turn power off.
- Keep a wrench or turn-off tool in waterproof wrap near gas meter.

Install strong latches on kitchen cabinets so things won't fall out in an earthquake.

Attach your water heater with metal straps to the wall studs.

Hang mirrors and pictures on closed hooks so they won't come off the wall easily.

## **Potential Hazards Worksheet**

Surrounding area	

# Step 2: Create a disaster preparedness plan

Creating a disaster preparedness plan will help you know what to do during a disaster and how to get in touch with people you care about afterwards. Make sure everyone in your family knows this plan. Practice it so everyone is familiar with it. This will help everyone feel calm and ready to respond with ease, regardless of where people are when a disaster occurs (i.e., school, work, grocery store, home).

This plan should fit your needs. Many of us have mobility, medical, transportation or other kinds of additional needs. Think about what you'll need to know in an emergency. If that information doesn't fit in the form to the right, make your own document.

# Create a family communication and reunification plan

- Write down the phone numbers of each key contact or emergency contact and make copies for everyone to carry with them.
- Establish an out-of-state or out-of-country contact for everyone to check in after a disaster. Long distance calls may be easier than local calls if local phone lines are down or jammed.
- If you have children, put a laminated copy of your contact list in their backpack.

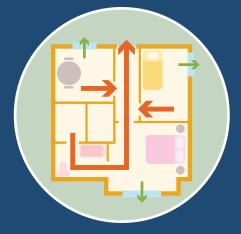

Choose meeting places that are outside your home or shelter. Pick a spot in your neighborhood and a spot outside your neighborhood.

In an emergency, try texting. Texts often have an easier time getting through. Texting also keeps phone lines open for 911 emergencies.

You can also send texts to 911 in case you are unable to make a call.

Decide on the safest escape routes from your home, workplace and school including two ways out of each room. Practice using these drills where you live.

# **Communication Plan**

You can customize your plan on a separate piece of paper. This form is a guide.

## Helping children prepare

If you live with children, include them in the conversation and planning process. For example:

- Have age-appropriate conversations about emergencies that could affect your family.
- Make sure kids know the family meeting location.
- Insert an index card with important contacts in your child's backpack or wallet in case they need help reaching you.
- Have a plan who will pick up your children from school or childcare in case you are unable to get there on time.
- Ask your children's school or daycare about their emergency and evacuation plans.

Make sure kids know how and when to call 911.

Make sure kids know what smoke and carbon monoxide alarms sound like.

Have kids memorize family names, home address and phone numbers.

### Preparing for people with disabilities

People with disabilities may need to take additional steps to prepare for disasters.

• Think about what you may need to meet your individual needs in different types of emergencies.

- If you are mobilityimpaired, plan several accessible routes to get to your meeting places.
- If you depend on power for medical equipment, plan for power outages – have a backup battery power source.
- If you depend on daily medications, talk to your medical provider about an emergency supply of medicine.
- If you can, store back-up equipment, such as a manual wheelchair, at your neighbor's house, school or workplace.
- Consider getting medical alert system to call for help.

## Visually impaired

You may need to guide sighted people in helping you when electricity is out.

 Plan to make noise and alert other people for help if your surroundings are unsafe or you feel trapped.

• Keep a whistle by your bed and in your "grab and go" bag.

#### **Hearing impaired**

You may want to:

- · Have a flashlight, pad and pencil by your bed and in your "grab and go" bag.
- Ahead of time, ask someone who lives nearby to share emergency information to you as it comes over the radio.

- Let neighbors know that you cannot hear evacuation alerts, so that they can assist you.
- Register for text alerts at www.publicalerts.com
- Have a backup battery power source for your phone so you can get texts.
- Consider purchasing a bed shaker smoke alarm.

### Preparing for companion/ service animals

Have at least a 3-day food and water supply. Try for two weeks if you can. Along with food, keep:

- Blankets/towels
- Leash, harness
- Litter pan, plastic bags and scooper
- Pet carrier for easy transportation
- ID tags and microchip numbers
- Have a photo of you with your pet in case you are separated and need to establish that you are the owner.

# **Step 3: Important documents**

Keep your important documents in a safe place and take them with you during an evacuation. This is a sample list:

- Immigration paperwork, such as work permits, visas, matriculas and other important documents.
- Birth certificates, marriage certificates, passports and immigration documents (see the Know Your Rights section at the end of this workbook for info on immigrant rights).
- Recent family photos.
- Insurance policies.
- Family communication plan.
- Property records, such as proof of address, deed or lease documents.
- Medical information like: medical records, prescription information, doctors contacts and health insurance.
- Financial records like: recent tax return, paycheck stub, stocks and bonds.
- Make copies of these documents and store them fire-and waterproof safes.
- Store documents electronically by taking photos of them and storing them on a thumb drive or in the cloud—or just email them to yourself and a trusted friend living outside the region.

# Important Household Documents Checklist

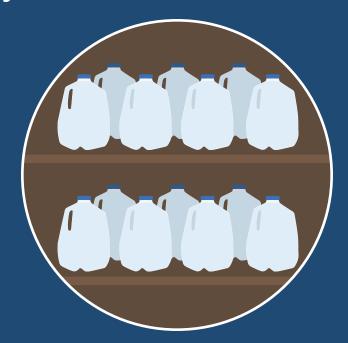

**Vital Records** Photo identification for all family members, pets, and service animals; passports; birth certificates **Insurance policies Family Emergency plan Family Communication Plan Property Records** Proof of address: deed or lease to home **Medical Information** Medical records, prescription information **Financial records** Federal and state tax returns. stocks and bonds Others Recent photographs

# **Step 4: Preparing disaster supply kits**

Your kit will help you to get through the first few days after a disaster. You can get these items over time. If you can store two weeks of supplies, that is best. But even a few days can be a big help. Store the kit someplace you will be able to get to in an emergency, even if your home is damaged.

#### Water

- Store one gallon of water per person, per day for 14 days (that's 14 gallons per person).
- Use bottled water (follow the "best by" dates on the bottle) or tap water in clean plastic containers (ideally, replace every six months).
- Store water bottles in a cool and dark place.
- Do not store water in juice or milk containers because they may contain bacteria.
- If you need to purify water, boil it for at least three minutes, or add 16 drops of unscented liquid bleach to one gallon of water. Stir and let it stand for 30 minutes before using.
- You DO need to purify rainwater.
- Learn how to remove water from your water heater. Turn off the gas or electricity to the tank before using the water for an emergency.

#### **Food**

- Select foods that require no refrigeration and little preparation. When water is limited, save water for drinking and avoid using water for cooking.
- Select food with low sodium to help keep thirst down and preserve water.
- Make sure you select foods that meet your dietary needs and tastes.
- Get nutritious food that your family will enjoy.
- Keep food in dry and cool environment.
- Mark your calendar and check your food every six months. Eat anything that's nearing expiration, and then replace it.
- Suggested food items:
  - Ready-to-eat canned meats, fruits and vegetables
  - Canned juices, milk and soup
  - High-energy foods such as peanut butter, jelly, crackers, granola bars
  - Vitamins, infant food and food for special diets
  - Staples like sugar, salt and pepper

# Other items For your emergency kit

(see detailed shopping list at www.PublicAlerts.org)

- First aid kit
- Blankets
- Flashlights
- Extra batteries
- Cash (small bills)
- Fire extinguisher
- Trash bags
- Required medication

- Sturdy shoes for each person
- Can opener
- Diapers, baby formula
- Hygiene products
- Warm clothes
- Knife

# **Emergency Foods List**

Make a list of emergency foods you or your family will enjoy.

Emergency Foods List	

# Step 5: Car

Always have a half tank of gas in your car.

Have an emergency car kit that includes water, food, extra clothes, phone chargers, sanitation supplies and jumper cables.

# **Step 6: Emergency Toilets**

After a strong earthquake you may need to live without a working toilet for weeks or months. Disease is spread when human waste ("poo") is not handled and stored safely. See below on how to prepare a twobucket toilet system.

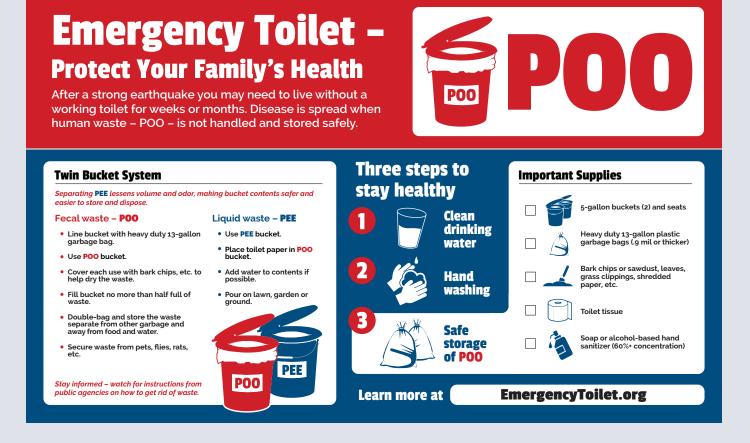

Image credit: Regional Disaster Preparedness Organization (RPDO) www.emergencytoilet.org

# Step 7: Get your neighbors and community members involved

Our communities have survived disasters large and small thanks to neighbors, community members, friends, family and strangers coming together to help each other. During a disaster, rescuers like firefighters may not be able to respond immediately. Most people will be helped by friends and neighbors. It is important to know the people who are near where you live

and work, and to know how you could support each other during a disaster. Everyone has something to contribute.

Want to start the conversation in your neighborhood? Take extra copies of this workbook to give to your neighbors.

# **Neighborhood Skills and Equipment Inventory**

Who knows what? Who has what? Who can do what?

Write the names of neighbors with these skills/knowledge and equipment/supplies:

Skills/Knowledge		
First Aid Skills	Crisis Counseling Skills	Emergency Response Skills
Child Care Skills	Plumber Skills	Coordinating/Organizing Skills
Elder Care Skills	Carpenter Skills	Language Skills
Search and Rescue Skills	Electrician Skills	
	Equipment/Supplies	S
First Aid Supplies	Fire Extinguisher	Ladder
Tents/Spare Bedding	Camp Stove	Crow Bar
Chain Saw	Walkie-Talkie	Strong Rope
Generator	NOAA Weather Radio	

# What to do during a disaster

People in Oregon should learn about and prepare for different types of disasters including: winter storms, earthquake, wildfire, floods and occasionally heat waves. A tsunami on the Oregon coast would NOT reach Portland.

# **A** Earthquake

In Portland we don't get a *lot* of earthquakes, but a big earthquake can happen—someday it will. It will cause strong ground shaking lasting for up to five minutes. It is important to know what to do during an earthquake and how to keep your loved ones safe.

### **Indoors**

In an earthquake, do the following:

#### DROP, COVER and HOLD ON.

- Drop down to the floor and take cover under a sturdy desk, table or other furniture
- Hold on to the table or desk.
   Hold on until the ground stops shaking.
- If there is no table or desk nearby, sit on the floor against an inside wall, away from windows and tall furniture.
- Protect your head and neck with your arms.
- Stay indoors until the shaking stops and it is safe to exit.

#### In bed:

 If you are in bed, stay there, curl up and hold on. Cover your head with a pillow.

#### If you are in wheelchair:

 Stay in it. Move next to an interior wall if you can. Lock your wheels and cover your head with your arms.

#### In the kitchen:

 Move away from the refrigerator, stove and overhead cupboards.
 Then drop, cover and hold on.

#### In a multistory building:

- Drop, cover and hold on.
- Do not use elevators. Be aware that fire alarms and water sprinklers may go off even if there is no fire.

#### Theater or stadium:

- Get on the floor between the rows and cover your head with your arms.
- Do not try to leave until the shaking stops. Stay calm and exit the building when the shaking stops.

A big earthquake will always have aftershocks (small and medium earthquakes that follow it). So after the ground stops shaking, go outside. Stay away from old buildings, any building that seems damaged, or anything else that could fall on you in an aftershock.

## **Outdoors**

If you live outdoors, be aware of your surroundings and objects or structures that can fall on you. For example, bridges, buildings and other hazards.

#### If you are outside:

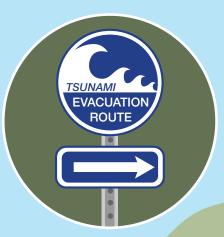

• Move to a clear area away from buildings, power lines, signs, trees, vehicles and other hazards.

#### If you are at the beach:

• Move to higher ground immediately and follow tsunami evacuation signs.

#### If you are driving:

- Pull over to a clear location and stop.
- Avoid bridges, overpasses and power lines.
- Stay in the car until the shaking stops.
- If a power line falls on your vehicle, do not get out. Wait for assistance.

#### In mountains or in the Gorge:

 Avoid unstable slopes or cliffs and watch for falling rock and debris.

# **After the Earthquake:**

- · Expect aftershocks. Each time you feel an aftershock, drop, cover and hold on.
- Check yourself for injuries and get first aid if necessary before helping others.
- There may be a lot of broken glass and debris. Protect your head, feet and hands.
- Check the natural gas or propane at your house. Shut it off if smells like gas (rotten eggs).
- Shut off water at the curbside to trap the clean water that's in your pipes and keep pollutants out.
- Get everyone out of your home.
- Watch for fallen power lines or broken gas lines; stay out of damaged areas.
- Text your contacts to let them know you are safe.
- Check on your neighbors.
- If you are trapped in the house, use your whistle or bang something to call for help.

#### Other potential hazards:

- If you smell a gas leak, shut off the main gas valve if you can. Go outside and wait for the gas smell to go away. Call the utility company to turn gas back on.
- Shut off power at the breaker box if electrical wiring is damaged. Leave the power off until damage is repaired.
- Unplug broken lights and appliances. They can cause fires when power is turned back on.
- Stay away from chimneys and walls made of brick. They could topple during an aftershock.

# Residential fire

About 65 percent of house fire deaths occur in homes with no working fire alarms. Here is how you can prevent a house fire.

- Make sure your home has a working smoke detector in every sleeping room and one on every level of the home.
- Practice your fire escape routes with everyone in your family, including children.
- Change smoke alarm batteries every six months.
- Do not overload electrical outlets.
- Keep flammable items like cloth or paper away from heat sources.
- Make sure to turn off the stove before leaving the kitchen.

#### **During fire:**

- If fire starts in a pot or pan, cover the pot with a lid and remove the pot from the heat.
- Do not pour water on a stovetop fire. It could make it worse.
- To evacuate from fire, stay low to avoid smoke. Get out as fast as you can.
- Call 911 for help.
- If you are unable to get out, close the door and cover vents and cracks around the door until help arrives.

#### After fire:

- If you have injuries, get treated by medical professionals.
- Wash small wounds with soap and water.
- Stay calm so you can help other people who need help.
- Check with the fire department before entering your home to make sure it is safe.

People who live near a natural area are at risk of wildfire. Wildfire risk is mostly in the summer when weather is dry for a long time. People who live near factories are at risk of hazardous material leak or fire. This can happen anytime.

#### **During a fire:**

- Be ready to leave when authorities issue an evacuation notice.
- Listen to local radios and television stations for updated information.
- Listen and watch for air quality reports about health warnings.
- Close windows and doors to keep indoor air clean.
- Avoid polluting indoor air. Do not burn candles, fireplaces or gas stoves. Avoid vacuuming.

#### After a fire:

- Inform your family and friends that you are safe.
- Do not enter your home until officials say it's safe.
- Avoid damaged or fallen power lines, poles and wires.

# Doing the following will help you stay warm and safe:

- Listen to weather on a local news station, so a storm does not surprise you.
- Keep your vehicle's gas tank at full. It will keep the fuel line from freezing.
- Cover your house windows with plastic from the inside to keep cold air out.
- If you plan to be away during cold weather, leave the heat on in your home set to no lower than 55 degrees F, or your pipes could freeze.
- If you don't have a home, go to shelters. Call 211 for open shelters in your area.

#### **During winter storms:**

- Keep warm! Stay inside if you do not have warm gear.
- Wear warm clothes, gloves, and hat when you go out.
- Go to a warming shelter if your home loses power during extreme cold weather. Call 211 for help.
- Do not drive if you do not have to! Take transit or stay home.
- Keep a disaster kit in your car if you must drive in a storm. Include a blanket and handwarmers in case you get stuck out on the road.

#### **After winter storm:**

- Let your family and friends know that you are safe.
- Clear your sidewalk, if you can. This keeps you safe from falls, and it helps your neighbors—especially people who are less mobile.
- Refill your supply kit if you use it during the storm.

# **Excessive Heat**

During hot weather, stay hydrated and stay in cool environment. Children and elderly are more sensitive to heat and dehydration than adults. The Multnomah County website has information on cooling centers such as libraries, day centers and places to play in the water. Also, you can call 211 to get information on open cooling centers in your neighborhood.

#### Tips to keep everyone cool:

- Drink lots of water, even if you are not thirsty.
- Stay in cool places when possible.
- Avoid using the oven and stove.

- Wear light, loose fitting clothing.
- Avoid being outside during the hottest part of the day, which is usually between 12–4pm.

#### **Heat Exhaustion**

#### **Symptoms:**

- Heavy sweating
- Extreme weakness
- Dizziness
- Nausea, vomiting
- Rapid heartbeat
- Shallow breathing

#### What to do:

- Remove excess clothing.
- Rest in a cool area.
- Take a cool shower, bath, or sponge bath.
- Drink plenty of water.

#### **Heat Stroke**

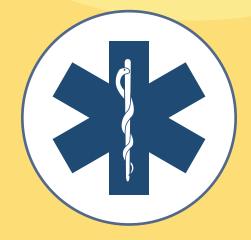

#### **Symptoms:**

- Confusion
- Rapid pulse
- Seizures
- Loss of consciousness
- Body temperature of 103° or higher
- Hot, dry skin or profuse sweating

#### What to do:

Call 911. Heat stroke is an emergency. While you wait for help, move to an air-conditioned space, and cool down with cold towels and ice.

Flood waters only a half foot deep can be strong enough to sweep a person off their feet.

- Check if you live in a floodplain. You can find out at www.portlandmaps.com.
- If you live in flood-prone area, consider purchasing flood insurance.

#### **During flood:**

- When a flood warning is issued in your area, go to higher ground.
- Stay away from floodwaters. Floodwater is essentially raw sewage which could be contaminated with harmful germs.
- If you are driving, turn around and go another way.
- Keep children away from floodwaters.

#### **After flood:**

- Let friends and family know that you are safe.
- Do not enter your home until officials say it's safe to do so.

# Community resources directory and contacts

The Portland Bureau of Emergency Management and Community Based Organizations offer several free resources to the community.

## **Resources from The Portland Bureau** of Emergency Management

Free emergency preparedness trainings: If you are interested in emergency preparedness trainings, please contact us at PBEMinfo@portlandoregon.gov or at (503) 823-4375.

#### **Basic Earthquake Emergency Communication Node** (BEECN) program:

- Within two days of a major earthquake, Portland plans to activate BEECNs at 50 locations around the city. Find the nearest BEECN on the BEECN map at the end of this workbook close to where you live and work, and practice walking or biking there.
- Each site includes volunteers with a red tent, a radio to report severe damage or injuries, a first aid kit and emergency information.
- Visit this website to learn more: www.portlandoregon.gov/beecn
- We offer free trainings for those interested to become BEECN volunteers in their neighborhoods. Please contact us at (503) 823-4375.

**Z-Card (Pocket prep):** At the end of this workbook, there is an additional emergency action plan. Fill in the information you will need in an emergency and carry it with you.

## **Resources from Community Based Organizations**

**Latino Network:** Provides community resources including immigrant rights and workers' rights, financial safety resources and much more. Visit their website for more information: www.latnet.org/community-resources

**VOZ Workers' Rights Education Project:** Voz is a worker-led organization that empowers diverse day laborers and immigrants to improve their working conditions and protect civil rights through leadership development, organizing, education and economic opportunity. Learn more about their work by visiting www.portlandvoz.org, or calling (503) 233-6787.

#### **APANO (Asian Pacific American Network of Oregon):**

APANO focuses on the key areas of community organizing, policy advocacy, civic engagement, leadership development, community development and cultural work. Visit their website to learn more at www.apano.org

### **Know Your Rights:**

An informational workshop about immigrants rights living in the U.S. For more information, contact: Antonio Ramirez Subira at (503) 806-3817 or visit www.latnet.org/community-resources

#### **LISTOS:**

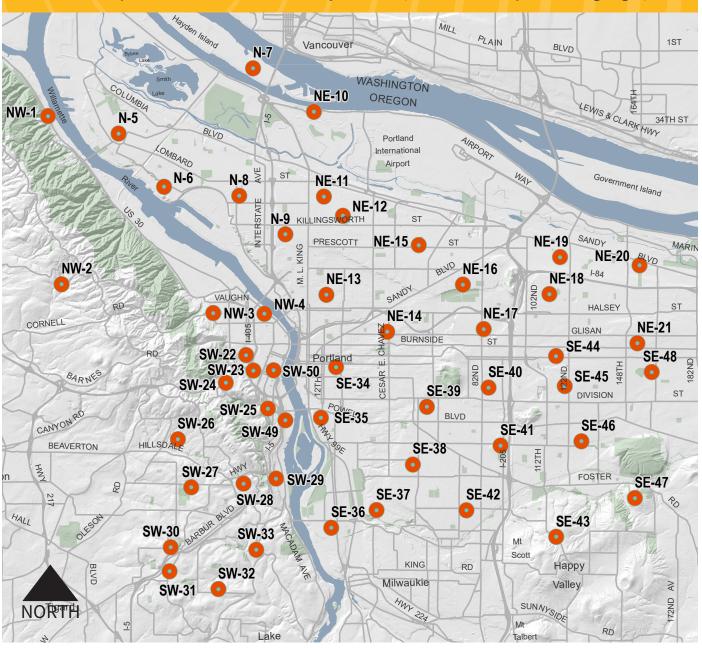

A culturally-specific emergency and disaster preparedness training offered in Spanish. The Portland Bureau of Emergency Management in collaboration with Washington County Public Health offer this training. If you are interested to bring Listos training in your community contact us at *PBEMinfo@portlandoregon.gov* 

#### **Mental Health First Aid:**

Learning about mental health first aid can be an important tool for preparing to help yourself and others during an emergency that can cause or trigger a mental health crisis. Local mental health programs in Clackamas, Multnomah and Washington counties have joined together to create a one-stop gateway where community members can go to learn about and register for free mental health first aid trainings. Learn more at www.gettrainedtohelp.com

**DISCLAIMER:** Please do not attempt to go to a Basic Earthquake Emergency Communication Node if you feel that doing so would put you in danger. These sites will not have supplies or provisions immediately following an earthquake or other citywide disaster. The primary role of these sites is communication and information sharing: between neighborhoods, agencies and Portland's Emergency Coordination Center. It may take up to two days, or longer, for these sites to become operational. Locations may change over time, or be relocated after a disaster if the pre-designated site is not safe.
